Packing bag preparation:

Before installation, the back plate of the pocket must be positioned correctly.

Due to shipping, the back plate can slip under the top/bottom plate of the pocket.

Press against the top/bottom plate until the back plate rests behind it (pic. 1).

Take notice of the correct side: the VanEssa logo shows towards the boot (pic. 2).

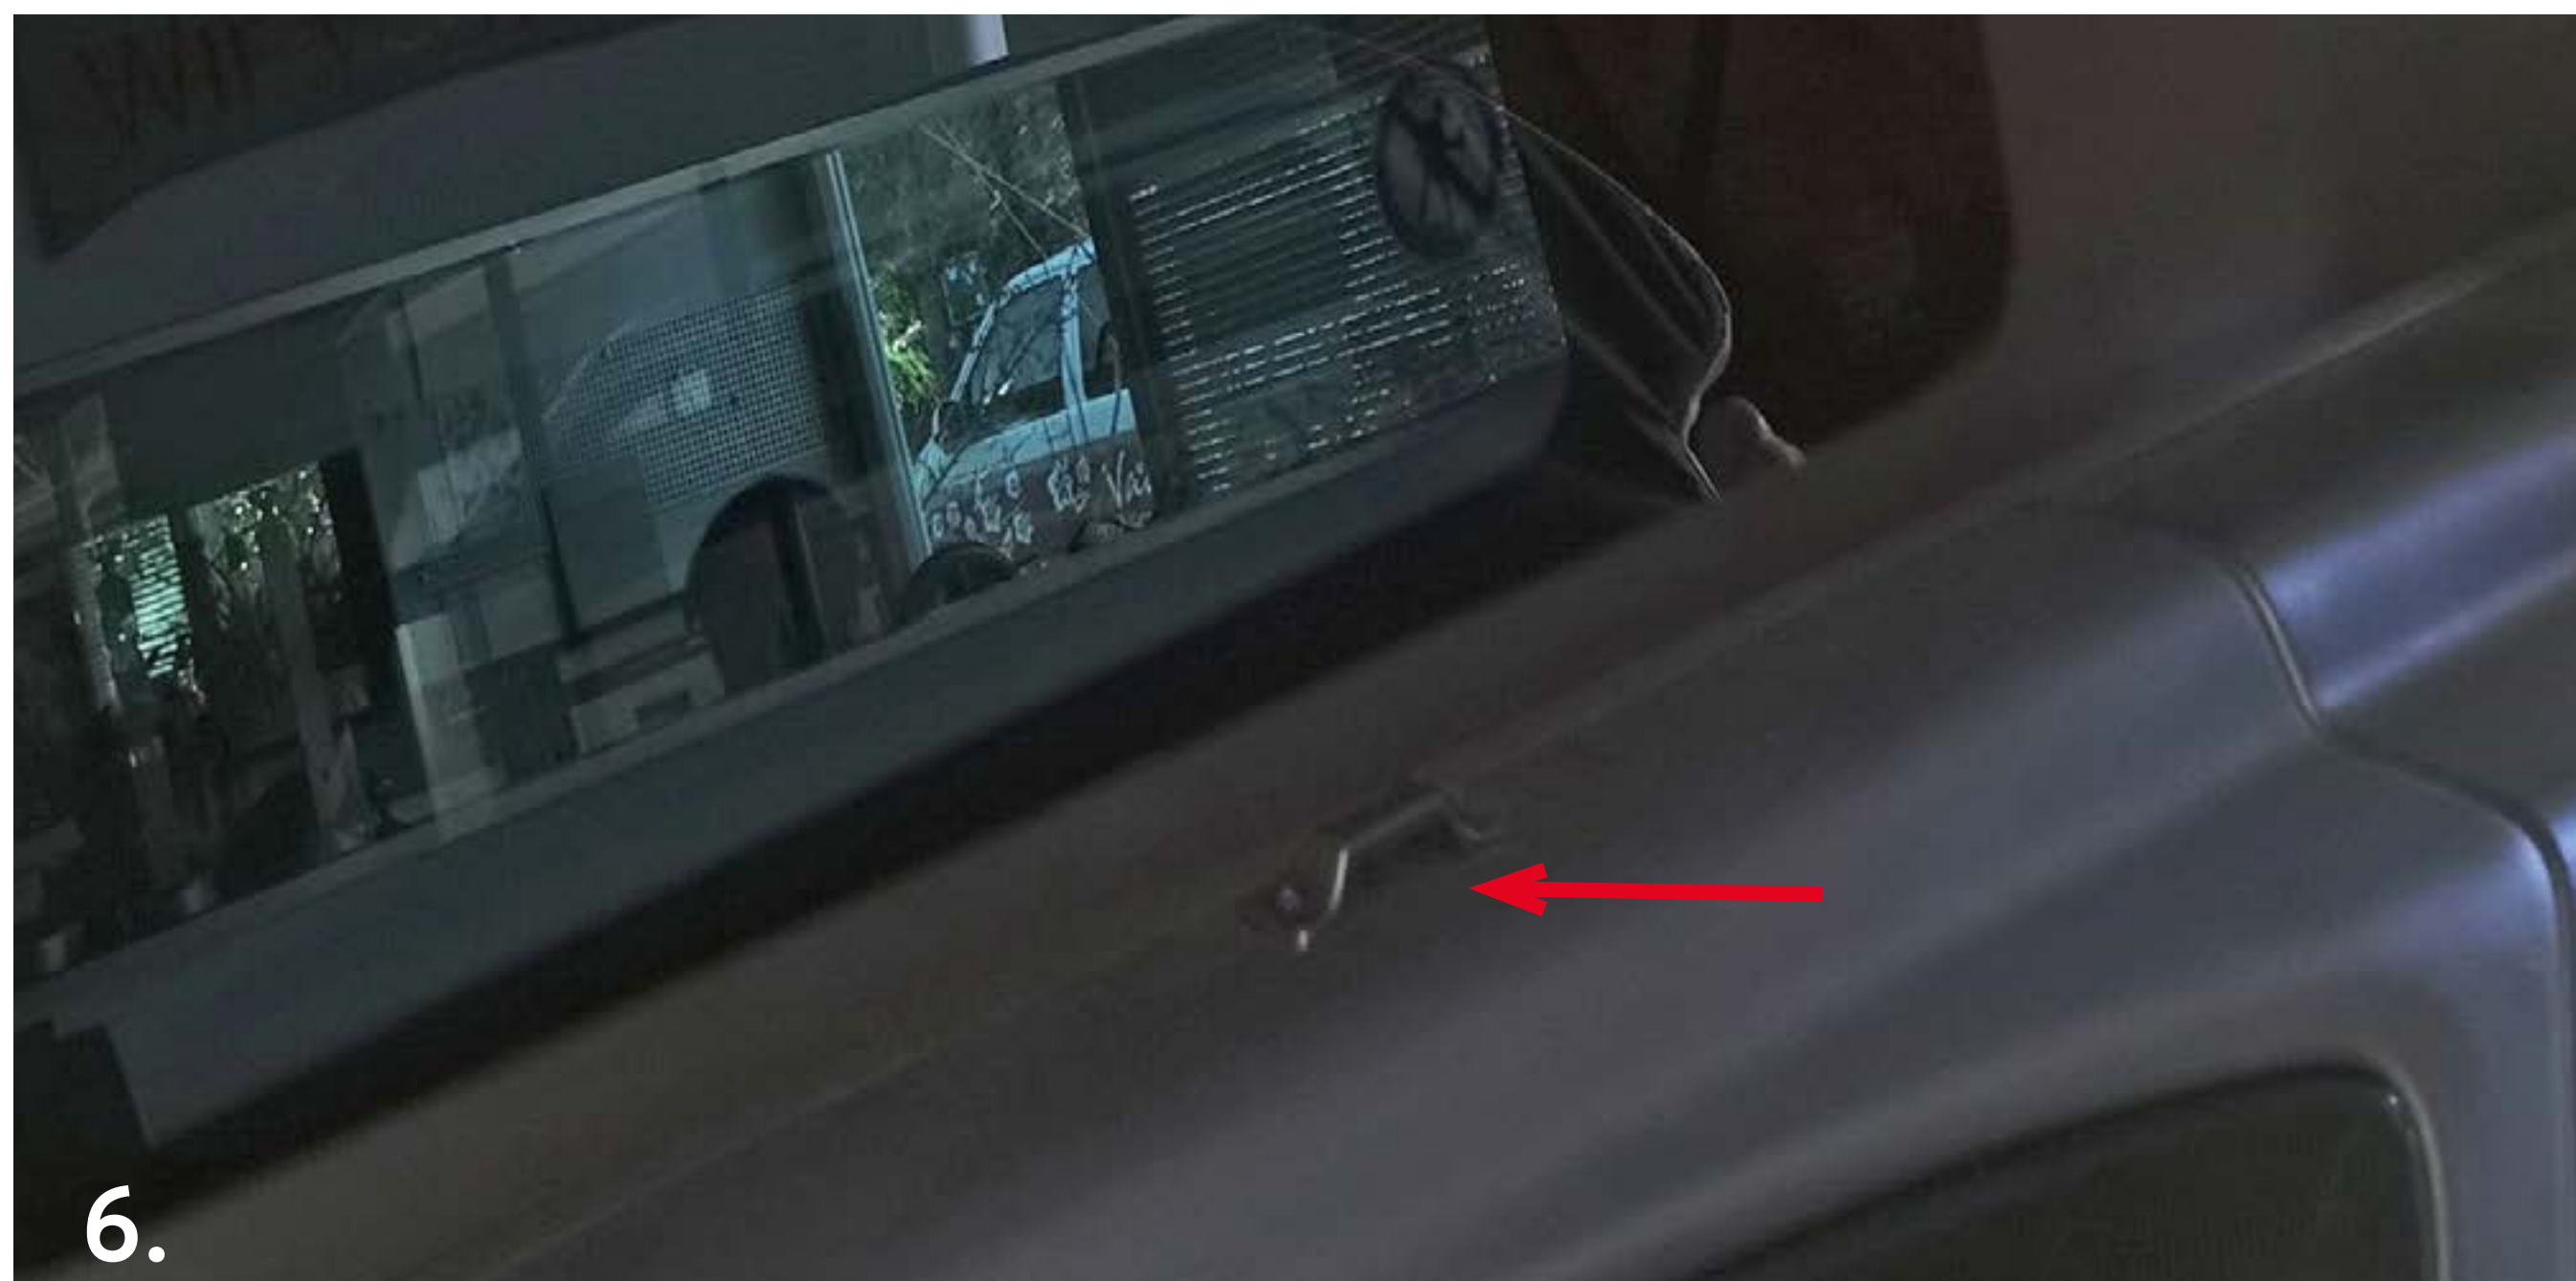

Tip:
In order to avoid moisture behind the bags, take them out from time to time and let them dry during the day.

Packing bag with sunblinds (pic. 3):

We recommend to be two persons for installation:

One person holding the sun blind a little off the window (pic. 4 + 5), the other person installing the bag as described below.

Fold the lateral flap and place the bag in the window with the bag flush with the inner side of the window.

Thread the back plate of the bag behind the rubber lip, first of all at the bottom, then at the top.

Tip:
Threading the bag behind the bottom rubber lip gets easier, when you dismantle the hook of the sun blind before (pic. 6).

Push the bag in the direction of the boot.
The slot fits exactly around the window engine,
in case you have one (pic. 7).

Now fold the flap back to the window and press
it on so that it finds support behind the rubber
lip (pic. 8).

As an additional tilt prevention, you can fix the cord on the hook under the handhold.
open the zipper of
If necessary, you can open the upper compartment and push the bag a little upwards (pic. 9).

Note:

The hook is not present on every model or is in a different position that cannot be used.

In addition, you can place the aluminum support bar between the vehicle lining and the window (pic. 10).

Important objects such as the cell phone (pic. 11a), keys (pic. 11b) or sunglasses (pic. 11c) can be deposited at the additional applications.
