

# Installation guide

## Coffee bar with module tower T1/T2/T3

### 1. Installation

- Take the non-slip mat of the coffee bar plate for the bore holes being uncovered (pic. 1).
- Fasten the coffee bar with the two included countersunk screws into the screw-in nuts of the module tower (pic. 2+3).
- Lay the non-slip mat back on the plate (pic. 4).
- Plug the 12V and the 230V plug into the sockets in the car.

Note: For practical reasons we recommend the use of the coffee bar in combination with a 230V socket inside the car. If you don't have one yet (e.g. VW Beach with external socket), feel free to ask us about our 230V insertion.

### 2. Coffee bar use

- Thread the power cable of the coffee machine through the hole in the corner and plug it into the multiple socket on the back side of the car.
- Place the coffee machine in the corner for being safe against falling over in case of braking (pic. 5).
- The coffee bar also provides two integrated USB sockets, which you can use for charging mobile phones, tablets, e.g. (pic. 6).
